

Got one of these ?
EPSON ECM-A0600
ECM-A0600 INFO

For technical information including schematics, chip documentation and a where to buy. follow this [link](#)

Where I got it.

I got the Epson ECM-A0600 from www.goldmine-elec.com ,a discount electronics supply house, for 4 or 5 dollars.

Update ! Goldmine is now out of stock.

What am I going to do with it?

I am looking at making a display for my [MP3 Player](#) that I bought from PJRC.COM .

What about it?

The module is a 128 X 128 pixel graphic LCD display.

It can be used as a 16 X 16 Character display in addition.

It comes with a 12 strip ribbon /plug connector. of which 2 of these contacts are unused.

The Module has 4 display chips. 2 SED 1630 Row drivers that have 68 rows each.

2 HD61104 Segment drivers that have 80 segments. The maximum displayable area would be 136 X 160 pixels.

The 2 other IC's on the display are a JRC 324G and a EPSON010. These chips are described on my [Info-Page](#).
